

Wooki Underquilt

The Warbonnet logo on the Wooki goes at the head end of the hammock and should be visible from the outside. The head end has a static fixed loop that should fit snugly over the end whip on your hammock. (we don't crank this knot super tight so you may untie it and make it slightly larger or smaller as is convenient. The foot end of the Wooki has a black rubber band with micro carabiner to apply the correct amount of tension to the quilt, clip the tiny carabiner to the base of your hammock's suspension. There is also a loop on the side of the Wooki that lines up with the Ribbon tie on the Blackbird and Blackbird XLC model hammocks, this ribbon tie/loop is an optional extra attachment point, although the quilt will stay put pretty well without it. As with any underquilt, when getting into the hammock, make sure you are sitting down into the hammock and not just into the underquilt which cannot hold bodyweight on it's own.
